

GOLD NOTE HP-10 OPTIMAL SETTINGS FOR HEADPHONES

OPTIMAL HP-10 SETTINGS GUIDE FOR HIGH-END HEADPHONES

The HP-10 is a headphone amplifier designed to deliver an uncompromising listening experience. Thanks to its advanced **Harman modes**, it optimizes the sound response to match the specific characteristics of each headphone model, ensuring a balanced and faithful reproduction.

In addition to adjusting impedance, gain, and signal balance, the HP-10 offers four **Crossfeed** options, essential for recreating a more natural soundstage, reducing listening fatigue, and enhancing stereo imaging depth. Selecting the most suitable Crossfeed option depends on the headphone’s frequency response and personal listening preferences.

This guide will help you determine the best parameters for your setup, allowing you to customize your listening experience to your needs. Refer to the table below to find the recommended settings and fully unlock the potential of the HP-10 for perfectly calibrated sound.

HEADPHONE MODEL	CROSSFEED	DAMPING FACTOR	HARMAN BALANCE (H)	HARMAN CLARITY (M)	HARMAN DEPTH (L)
AKG K701	Option 3	Low			
AKG K872	Option 2	High			
AKG K812	Option 2	High			
AKG K1000	Option 4	High			
AKG N90Q	Option 1	High
